F&M Trust Enters Construction Phase On New Headquarters

After months of careful and strategic planning, engineering, and analysis, the design development phase for a new F&M Trust corporate headquarters was finalized and construction is well underway. Via the architects at Noelker and Hull, our team engineered a design that transforms an old, vacant industrial building into 70,000 sq. ft. of office space for F&M Trust. Our design included a total mechanical, electrical and plumbing enhancement utilizing the latest technology in HVAC and lighting to allow for superior controllability.

Happy Retirement, Gail!

Please join Gatter & Diehl in extending best wishes to our long-time administrative assistant, Gail, who retired from the company at the end of last year. Gail has been with us for over 30 years, and all of us here have greatly benefited from her kind and loving personality, which is second to none. She will be sorely missed and impossible to replace.

We know Gail's eager to start this next chapter in her life, and we wish her nothing but the best in her future endeavors. Happy Retirement Gail!

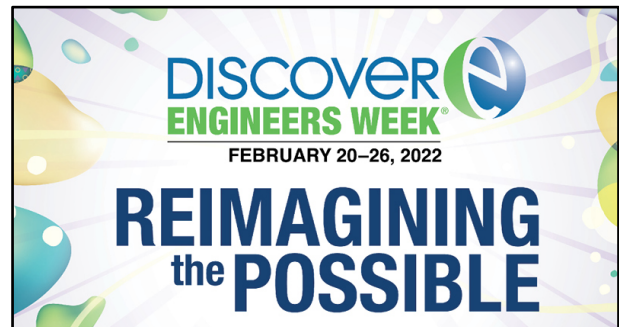

Solar Array Integration at Phoenix Contact a Success

After the finalization of the Logistics Center of America (LCA), Phoenix Contact was quick to pursue an alternative clean energy project to further expand on their dedication to an energy conscious campus. The project was realized with the implementation of a 1 Megawatt Solar PV Array System which was constructed on the rooftop of the LCA.

The solar array system consists of 2,150 solar panels that generates up to 1,160,254 kWh of power. Not only did the project assist the LCA in achieving Net-Zero Energy by producing more energy via Renewable Solar PV than it consumes, it complements Phoenix Contact's STEM, internship, and apprentice programs to educate youth, prospective engineers, and technicians about clean renewable energy technology and its benefits.

Happy National Engineers Week! During the week of February 20th, we celebrate National Engineers Week which is dedicated to ensuring a diverse and well-educated future engineering workforce by increasing understanding of and interest in engineering and technology careers.

Bedford Elementary Begins Installation of Infrastructure Enhancements

Installation of the fire alarm systems, unit vents, and the HVAC control system has started at the Bedford Area Elementary School. This is just one of a multitude of enhancements to the school's infrastructure system which will promote a healthy and comfortable educational environment for the students, faculty, and staff. Stay tuned for more updates on this state-of-the-art project!
